

## **INTRODUCTION TO z/OS**

**September 23, 2008 – September 26, 2008**

### **General Q&A**

#### **1. What will the class offer?**

**As an introduction to the z/OS operating system, it should give attendees a basic understanding of the z/OS environment. It is geared towards attendees who have limited or no z/OS skill (e.g. developers from the UNIX platform).**

#### **2. Cost**

**The registration is free. Attendees are responsible for their own travel arrangements and expenses.**

#### **3. Agenda and duration**

**See the Agenda file. It is a 3 1/2 days class.**

#### **4. Lab**

**There is no traditional hands-on lab. Instead there will be in-class demos of z/OS functions, along with some system access for attendees.**
